

SYMBIOSIS INSTITUTE OF TECHNOLOGY, NAGPUR

Symbiosis International (Deemed University)

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category - I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

Experiment No:- 01

AIM: Demonstrate inline, internal, and external JavaScript; use console methods; create a webpage showing user info and a welcome

Software/Tools Required: (VS Code), Web Browser, JavaScript (ES6), HTML

Theory: JavaScript is a scripting language used to make web pages interactive and dynamic. It can be added to an HTML page in three ways: **inline JavaScript** (inside HTML elements), **internal JavaScript** (inside the <script> tag), and **external JavaScript** (in a separate .js file linked to the HTML page). JavaScript also provides **console methods** such as console.log(), console.warn(), and console.error() for debugging and displaying messages. In this experiment, JavaScript is used to display user information and a welcome message on a webpage while demonstrating different ways of adding JavaScript to HTML.

Output:

Result: Successfully demonstrated inline, internal, and external JavaScript, used console methods, and created a webpage displaying user information with a welcome message.

Welcome to SIT Nagpur

About the Department

The Department of Computer Science Engineering at Symbiosis Institute of Technology, Nagpur is committed to producing industry-ready engineers equipped with strong programming skills, analytical thinking, and problem-solving abilities. The department offers a curriculum that blends core computer science fundamentals with emerging technologies such as Artificial Intelligence, Machine Learning, Web Development, and Cloud Computing – preparing students to excel in the ever-evolving tech industry.

Experiment No:- 02

AIM: Use var, let, const, and demonstrate basic features like template literals and DE structuring; build a billing calculator with

Software/Tools Required: (VS Code), Web Browser, JavaScript (ES6), HTML

Theory: JavaScript provides var, let, and const for declaring variables. Template literals simplify string formatting using backticks (` `), while DE structuring allows easy extraction of object or array values. These features make JavaScript code cleaner, more readable, and efficient.

Output:

Premium Billing Calculator

Fast, accurate & professional bill generation

Experiment No:- 03

AIM: To implement JavaScript control structures and form validation by creating a grading system based on user-entered marks."

Software/Tools Required: (VS Code), Web Browser, JavaScript (ES6), HTML

Theory: JavaScript control structures such as **if**, **else if**, **else**, and **switch** are used to make decisions based on conditions. Form validation ensures that users enter valid data before processing, preventing incorrect or incomplete input. In this experiment, the entered marks are validated, and the total, percentage, grade, and pass/fail status are calculated using JavaScript control structures.

Output:

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category - I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

Experiment No:- 04

AIM: generate a profusion prompt to Use function types, scope, and closures; apply try-catch; build a palindrome checker

Software/Tools Required: (VS Code), Web Browser, JavaScript (ES6), HTML

Theory: Function Types:-A **function** is a reusable block of code used to perform a specific task. JavaScript provides different types of functions such as **Function Declaration, Function Expression, Arrow Function, Callback Function, and Higher-Order Function**. Functions improve code reusability, readability, and organization.

Scope:-Scope defines the accessibility of variables in a program. JavaScript mainly has three types of scope:

- **Global Scope:** Variables accessible throughout the program.
- **Function Scope:** Variables accessible only inside a function.
- **Block Scope:** Variables accessible within a specific block using let and const.

Closures:-A **closure** is a JavaScript feature where an inner function can access variables from its outer function even after the outer function has completed execution. Closures are used for data privacy and maintaining state.

try-catch Exception Handling:-try-catch is used to handle errors during program execution. The try block contains risky code, while the catch block handles errors and prevents program failure. The finally block executes after the process is completed.

Palindrome Checker:-A **palindrome** is a word, number, or sentence that remains the same when read forward and backward. The palindrome checker takes user input, removes unnecessary characters, reverses the text, and compares it to check whether it is a palindrome.

Output:

SYMBIOSIS INSTITUTE OF TECHNOLOGY, NAGPUR

Symbiosis International (Deemed University)

(Established under section 3 of the UGC Act, 1956)

Re-accredited by NAAC with 'A++' Grade | Awarded Category - I by UGC

Founder: Prof. Dr. S. B. Mujumdar, M. Sc., Ph. D. (Awarded Padma Bhushan and Padma Shri by President of India)

Enter Text or Phrase:

shriya yerane

13 characters

madam

Was it a rat I saw?

OpenAI

Check Palindrome

Reset

NOT A PALINDROME

Copy

Original Input: shriya

Cleaned Output: shriya

Execution Time: 0.200 ms

Enter Text or Phrase:

madam

5 characters

madam

Was it a rat I saw?

OpenAI

Check Palindrome

Reset

PALINDROME

Copy

Original Input: madam

Cleaned Output: madam

Execution Time: 0.000 ms

Result: The concepts of function types, scope, closures, and try-catch exception handling were successfully implemented in JavaScript. A Palindrome Checker was developed that validates input and correctly identifies whether the given text is a palindrome.

CASE STUDY-04

AIM: atm system verifies if the pin is palindrome. if palindrome, display security message . To implement this create a function to reverse the entered pin number and another function to check if it is palindrome. use function declaration, function expression ,arrow function and demonstrate scope and closure concepts.

/* ----- Reset ----- */
* {
  margin: 0;
  padding: 0;
}
```

1. GLOBAL SCOPE

These variables are declared outside every function, so they are visible anywhere in this file (global scope). We keep this list deliberately small – most banking apps avoid leaning on globals, but a couple of "identity" constants are a reasonable exception.

```
/* ===== */

const bankName = "SecureVault Bank"; // Global Scope variable
const atmLocation = "Terminal #4471 - Nagpur Branch"; // Global Scope variable

console.log(`%c[GLOBAL SCOPE] bankName = "${bankName}" is accessible everywhere in this file.`, "color:#34E0C4");

/* ----- */

2. DOM REFERENCES (cached once for performance)
/* ===== */

const pinInput = document.getElementById("pinInput");
const toggleVisibility = document.getElementById("toggleVisibility");
const verifyBtn = document.getElementById("verifyBtn");
const resetBtn = document.getElementById("resetBtn");
const errorMsg = document.getElementById("errorMsg");

const resultBlock = document.getElementById("resultBlock");
const enteredDigitsEl = document.getElementById("enteredDigits");
const reversedDigitsEl = document.getElementById("reversedDigits");
const palindromeStatusEl = document.getElementById("palindromeStatus");
const attemptCountEl = document.getElementById("attemptCount");
const securityMessageEl = document.getElementById("securityMessage");

/* ===== */

3. FUNCTION DECLARATION – reversePIN(pin)
/* ----- */

Function declarations are hoisted, and are the classic "named
```
